PROFESSIONAL SUMMARY

Software Developer fresher with practical experience in Java, Spring Boot, React.js, PostgreSQL, and MERN-stack development. Built REST services, JWT-based security, database-driven applications, and a cloud storage platform spanning 3 providers with encryption, replication, failover, and containerized deployment. Developed AMPLIFY, an AI-powered campaign mobile prototype using React Native, Expo, Spring Boot, PostgreSQL, and the Google Gemini API.

EDUCATION

Sri Ramakrishna Institute of Technology, Coimbatore **2022 – 2026**
B.E. Computer Science and Engineering *CGPA: 8.07/10*

WORK EXPERIENCE

Java Full Stack Intern **June 2026 – August 2026**
Gradtwin

- Delivered web applications with Java, Spring Boot, React.js, PostgreSQL, REST APIs, and JWT-based security across frontend and backend layers.
- Built **Cloud of Clouds**, a multi-cloud storage platform connecting 3 providers: AWS S3, Google Cloud Storage, and Azure Blob Storage.
- Added AES-256-GCM encryption, BCrypt password hashing, primary-replica storage, and automatic download failover to improve data protection and availability.
- Integrated Docker-based deployment and production-tested authentication, file upload, download, deletion, health checks, and provider selection.

PROJECTS

Cloud of Clouds – Intelligent Multi-Cloud File Storage System
Technologies: Java, Spring Boot, React.js, PostgreSQL, AWS S3, Google Cloud Storage, Azure Blob Storage, Docker

- Engineered secure file operations for registration, login, upload, download, deletion, and protected REST endpoints with a 50 MB upload limit.
- Designed provider selection around health, latency, and historical performance to dynamically route files across 3 cloud platforms.
- Protected stored content with AES-256-GCM encryption and user accounts with JWT authentication and BCrypt password hashing.
- Maintained primary and replica copies across cloud providers and enabled automatic download recovery when the primary storage location was unavailable.
- Containerized the Spring Boot service with Docker and deployed the frontend and backend for production validation.

AMPLIFY – The Campaign Studio (Hackathon)
Technologies: React Native, Expo, TypeScript, Java, Spring Boot, Spring Security, JWT, PostgreSQL, Google Gemini API, Render, Expo EAS

- Developed a mobile-first campaign amplification prototype to help users create and discover campaigns intended to reach audiences beyond existing networks.
- Integrated the Google Gemini API to generate AI-assisted campaign content from user-provided inputs.
- Implemented registration and login flows with JWT-based authentication, and connected the mobile frontend to Spring Boot REST APIs and PostgreSQL.
- Deployed the backend to Render and generated an installable Android APK using Expo EAS for demonstration and testing.

User Details Management
Technologies: MongoDB, Express.js, React.js, Node.js

- Created a MERN-based user management platform with authentication and a responsive interface for profile administration.
- Exposed REST endpoints for complete CRUD workflows covering user creation, retrieval, modification, and deletion with MongoDB persistence.

AI Chatbot Automation
Technologies: n8n, APIs, Webhooks

- Built an n8n workflow that connected APIs and webhooks to automate query handling and response generation.
- Orchestrated the end-to-end conversation flow without manual processing.

TECHNICAL SKILLS

Programming Languages:	Java, JavaScript, TypeScript, C, Python
Frontend Technologies:	React.js, React Native, Expo, HTML5, CSS3, EJS, Bootstrap, Tailwind CSS
Backend & APIs:	Spring Boot, Spring Security, Node.js, Express.js, REST APIs
Databases:	PostgreSQL, MongoDB, MySQL
Security:	JWT Authentication, BCrypt, AES-256-GCM
AI Integration:	Google Gemini API, n8n, API Integration
Cloud Technologies:	AWS S3, Google Cloud Storage, Azure Blob Storage, Render
Development Tools:	Git, GitHub, Docker, Postman, VS Code, Expo EAS
Core Concepts:	OOPS, DSA, CRUD, Authentication and Authorization

HACKATHON

Full Stack Mobile Engineer Role – Hackathon
Project: AMPLIFY – The Campaign Studio

- Built and demonstrated an AI-powered mobile campaign application using React Native, Expo, Spring Boot, PostgreSQL, and the Google Gemini API.
- Received a **Certificate of Appreciation** for participation and effort.

CERTIFICATIONS

- IBM – Use GenAI for Software Development
- NPTEL – Cloud Computing
- NVIDIA – Fundamentals of Deep Learning
- NPTEL – Python for Data Science
- Udemy – JavaScript Fundamentals to Advanced
